Project proposal v2

Scalable AI | EE 290 / 194 | Fall 2026

Proposal v2 should provide additional detail on the research question, proposed method, experimental plan, and risks. Incorporate the feedback on v1 and explain any changes to the project plan.

A good project proposal demonstrates a thorough literature search, identifies the work most closely related to the project, establishes the gap in current research, and clearly explains the novelty of the proposed project. It balances scope and feasibility: the project should be nontrivial and demonstrate ambition while remaining achievable within the available time and compute resources. It also specifies the baselines, where applicable, and the metrics that will be used to test the hypothesis, includes relevant ablations, and explains what would constitute convincing evidence.

Submission

Submit a 2–3 page proposal, excluding references, by Wednesday, October 7 at 11:59 PM. Submit one PDF per group through Gradescope and include all group members in the submission.
